The networked system
that maximises your business
performance in an age
of convergence

Panasonic Hybrid IP PBX

An Intelligent Solution for Your Business Communication Needs

Panasonic's Hybrid IP PBX system is a powerful communications tool designed to support businesses in today's Converged Networking age.

Reflecting on Panasonic's 20 years as a leader in the field, the Hybrid IP PBX system merges PBX functions and reliability with IP technology. The result is a high-performance business communication system that provides advanced telephone and messaging solutions, efficient and flexible communications, DECT Wireless Mobility, Voice-Over-IP, and seamless integration with your PC through plug-n-play USB connection.

In line with Panasonic's commitment to user-friendly operations, the Hybrid IP PBX system is easy to use, even for people without much experience with IP technology.

The Internet and broadband technologies have revolutionised the business world of today. Panasonic's Hybrid IP PBX system lets you keep pace with leading-edge technology and features that will completely transform the way your company communicates.

■ Makes Communications Easy

Panasonic's digital telephones are stylish, efficient and easy to use.

The phones feature an ID display of up to 24 characters a large easy-to-read 6-line back-lit display, an easy-to-view Message/Ringer Lamp, Navigator Keys for quick and easy operation, 4-step angle adjustment for greater flexibility, and a USB terminal that provides easy plug-n-play connection to a PC.

■ Future-Ready Design

The Hybrid IP PBX is a communications tool your business can grow with. This highly upgradable unit comes ready for use with IP Phones, IP Cameras, and other new devices coming to market in the near future.

■ Cost-Cutting Performance

Panasonic has leveraged leading edge telecom networking and IP technologies in the Hybrid IP PBX. Customers can reap the business benefits of these technologies to achieve low-cost, easy, and reliable inter-office multi-site voice solutions based on most inexpensive calling routes.

- QSIG*
- Voice over Internet Protocol (VoIP)
- Least Cost Routing (LCR)

* QSIG is an industry-standard digital networking protocol.

■ Efficiency That You Will Appreciate

Our versatile solutions bring a wide range of benefits to your company. Wireless equipment allows you freedom of mobility so you can initiate or respond to important calls from anywhere in your office, while the messaging solution adds value to virtually all your services. Advanced call centre functions improve communication efficiency and allow you to serve customers more effectively. The Hybrid IP PBX makes it easy to distribute calls, manage your telephone agents, and control office use of the phone system. Compatible with Computer Telephony standard protocols, TAPI and CSTA, the Panasonic Hybrid IP PBX can serve as the core of a powerful, high-value-added Computer Telephony Integration (CTI) system.

■ An Affordable System that Adds Value to Your Business

The new Messaging Features offer greater flexibility. If short of staff, you can handle calls with the Automated Attendant Service. You can upgrade to Unified Messaging using CTI technology that can combine e-mail, fax and voice mail, giving you multi-media communication capabilities. You can even customise the system to meet the needs of different callers. If you combine the system with a Panasonic Voice Mail System, you can get additional features that are available only from Panasonic, such as Live Call Screening, Two-Way Recording, and Two-Way Transfer.

■ Reliability

The reliability of Panasonic's Hybrid IP PBX system is assured by rigorous quality control and testing before it leaves the factory, guaranteeing you piece of mind. The Hybrid IP PBX is also designed for quick and easy maintenance to keep system downtime to an absolute minimum. You can change or add modules without shutting down the system.

■ Higher Productivity, Greater Customer Satisfaction

Desktop PC Integration improves call handling and provides added functionality for power users. A 'snap-in' USB port module makes it easy to connect a Panasonic digital telephone to your desktop or laptop computer.

User Productivity

Using PC Phone software, you can integrate your phone system with a database, giving you a powerful Customer Relationship Management (CRM) support tool. Selective or automatic Call Recording, Intelligent Telephone Answering Machine (TAM), as well as Microsoft Outlook synchronisation are just a few of the exceptional features that can provide enhanced added functionality to telephony power-users in your company.

Attendant Productivity

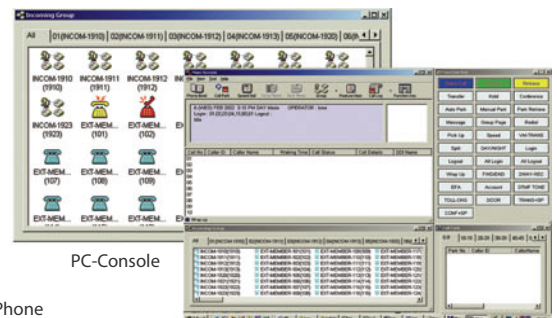

Productivity is further improved by the PC Console software application, which gives operator attendants the ability to answer and transfer calls and perform other routine call-handling duties by simple, visual drag-and-drop operations using a standard PC mouse or other similar pointing device. The attendant can also take notes in the absence of a user. These notes pop-up when the user calls the attendant to retrieve the messages.

■ PC Phone and PC Console (KX-T7636 and KX-T7633)

Plug-n-play connection via USB terminal to your PC offers an easy CTI solution. Using the PC and telephone together is more efficient and presents a more professional image to callers. PC console allows operators to manage calls more effectively.

PC-Phone

PC-Console

Features to Support and Help Your Business Grow

1 Alphanumeric Display

Visual feedback on this user-friendly display makes it easier to handle calls and perform other tasks. Use it to view a variety of information (see list below) or to access the Hybrid IP PBX system's many features. You can also make calls by simply following the visual prompts shown on the display.

- Incoming caller's name and number (ISDN, Caller ID)
- Message waiting, absent messages, feature settings
- Log of incoming and outgoing calls (Call Log)
- System/personal speed dialling
- Extension lists
- Call duration
- Menu of system features
- Time and date

2 Headset Jack for Hands-Free Convenience

3 Message/Ringer Lamp (Red/Green)

The large, easy-to-see lamp illuminates to indicate when a call comes in, so you can tell when the telephone is ringing even from a distance. The colour of the lamp indicates the status – green for an internal extension line, flashing red for an outside line, and constant red to indicate that a caller has left a message.

4 Digital Duplex Speakerphone for clear hands free operation

KX-T7636 with KX-T7603

- 6-Line Back-lit Display, 24-Programmable Keys, and a Speakerphone
- Optional 12-Programmable Keys and USB port

5 Time-Saving, Easy-to-Use Navigator Keys

6 Programmable Keys with Red/Green LED

■ eXtra Device Port (XDP) and Digital XDP (DXDP)

Use the XDP port to add an analogue phone, cordless phone, or other single-line device to your extension phone, without the cost of an additional line. This lets you send a fax while talking to a customer. Or, by connecting a modem to the XDP port, you can download data from your PC or access the Internet while talking. The DXDP port allows you to add a second digital telephone to your extension. This increases your system capacity without the need for additional extension cards and wiring.

■ Multi-language Capability

The Hybrid IP PBX accommodates up to five different languages for use in geographic areas where more than one language is commonly spoken. The language can be set at the PBX for a specific telephone extension, to meet the needs of the person who uses that extension.

KX-T7633

- 3-Line Back-lit Display, 24-Programmable Keys, and a Speakerphone
- Optional 12-Programmable Keys and USB port

KX-T7630

- 3-Line Display, 24-Programmable Keys, and a Speakerphone

KX-T7665

- 1-Line Display, 8-Programmable Keys, and a Speakerphone

KX-T7640

- Digital DSS Console (60 DSS)

KX-T7600 Series are available in both Black and White

More Freedom, Greater Clarity

Have an important customer on the phone and need to walk away from your desk to attend a very important meeting as well? Panasonic Wireless DECT connectivity is here to help. The Panasonic Hybrid IP PBX system lets you simply continue your current conversation over a lightweight, business-smart wireless telephone as you talk with an important customer while going to your desk or moving around the office. Because the system is digital, the voice comes through loud and clear.

The KX-TDA Hybrid IP PBX system allows wireless communication over an extended range by using multiple cell stations that boost the flexibility and mobility of your wireless handset. Using the Wireless XDP, you can set your wireless telephone to have the same extension as your desk telephone, and then receive calls even when away from the desk. You're always there, ready to receive your customers' calls, and make the most of every business opportunity that comes along.

■ Superior Call-Handling Efficiency

With its intelligent call-handling functions, the Panasonic KX-TDA Hybrid IP PBX system can serve as the core of a contact centre that efficiently and intelligently handles all customer calls. Use the Hybrid IP PBX to automatically distribute incoming calls as desired and set the system to direct callers to an appropriate group or multiple groups simultaneously for efficient call handling.

Other features that help ensure greater customer satisfaction and prevent missed business opportunities are:

- VIP Call
 - Automated Attendant
 - Queuing
 - Overflow extensions
 - Day, Lunch, Break, and Night modes
- Call Centre Features
- The Hybrid IP PBX supports certain powerful call centre features that address both agent and supervisor business needs:
- Agent Log-in ID
 - Agent Log-in/Log-out
 - Automatic Log out (if consecutive calls remain unanswered)
 - Wrap-up time
 - Not Ready
 - Walking extensions ("Hot Desking")

- Supervisor Level Monitoring and Reporting
- An extension can also be designated for use by a call centre supervisor, allowing him access to various information about incoming calls to each group like - number of calls in queue, longest queuing time, etc. A supervisor also can check the log-in/log-out status, and monitor the status of group members. This information can be displayed via an LCD report, print-out or by DSS key indication.

- Call Distribution Types
- The system provides a variety of call distribution patterns. These call patterns can help you manage your customer calls more efficiently:
- Uniform Call Distribution (UCD),
 - Simultaneous Ringing
 - Priority Hunting

Keeping Telephone Costs Down

VoIP Technology and Networking

The Hybrid IP PBX can serve as the core of an inexpensive, easy-to-use interoffice networking system. Facilities available with the KX-TDA system - such as E&M leased lines, QSIG, and Voice-over Internet Protocol (VoIP) - can help reduce costs while providing reliable site-to-site networking both within the company and outside.

Voice-over Internet Protocol (VoIP)

VoIP is the latest proven technology for voice communications where packets of digitally compressed voice are sent over IP data network, where it gets converted back to voice once it reaches the destination. By leveraging existing data networks, VOIP bypasses the PSTN and therefore bypasses all costs associated with PSTN calls no matter how long the conversation. In addition, VOIP also allows for more advanced telephony solutions and applications.

VOIP is an ideal solution for site-to-site communications between multi-site offices and retail chains - as well as for networking branch office and remote office employees, small office/home office (SOHO) workers, and home sales personnel, allowing for flexible working environment and lowering cost.

Centralised Busy Lamp Field (BLF)

Centralised Busy Lamp Field buttons are supported over both ISDN or Voice-over-IP networked Hybrid IP PBX. A central operator can view the status of selected networked extensions using DSS keys which light red when an extension is in use.

QSIG Networking

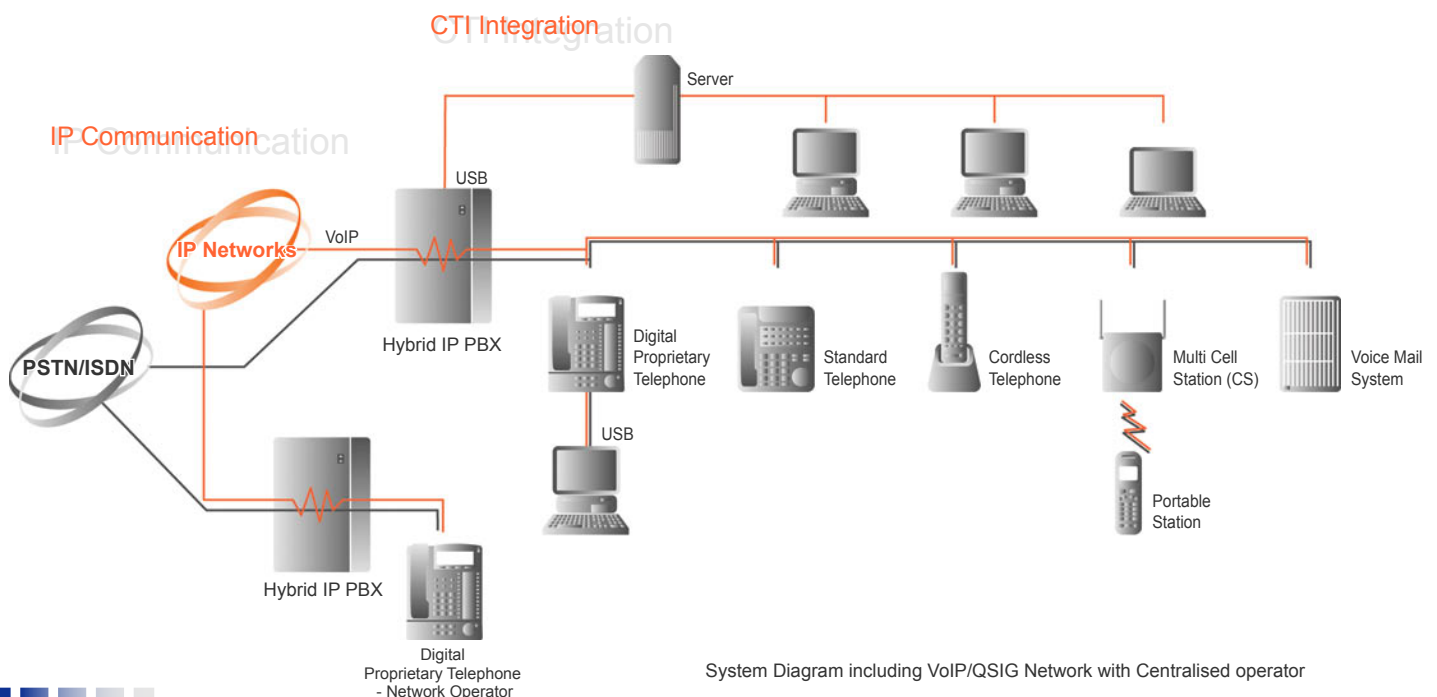

Supporting the industry standard ISDN QSIG protocol, the KX-TDA Hybrid IP PBX allows you to interconnect multiple PBX locations to help modularly build a large, effectively seamless virtual telephone system, creating a Voice Virtual Private Network (VPN), as well as giving you access to more advanced networking features like direct extension to extension dialling between PBXs, Caller ID of PSTN calls and Incoming Call Distribution group call handling across the QSIG network.

Using QSIG, customers can add the KX-TDA PBXs in all the branch offices while still maintaining a legacy PBX in the corporate Main Office.

Hospitality

This KX-TDA Hybrid IP PBX has several built-in features that support its use in a hotel or hotel-like environment, where extensions correspond to guest rooms.

- **Check-in/Check-out - room status control**
 The hotel operator extension can be used to view and change the check-in and check-out status of guest rooms. Flexible buttons on the hotel operator's extension can be set as Room Status Control buttons. Two buttons are available:

 - Check-in - Guests are checked-in, Telephone charges are cleared and Remote Extension Lock is turned off, allowing calls to be made by the guest from the room extension.
 - Check-out - Guests are checked-out and Extension data, such as Timed Reminder or Last Number Redial data, is cleared, and Remote Extension Lock is turned on - preventing calls.

When a guest has checked-in, the DSS key LED corresponding to the guests room will light RED. It will turn off when checked-out.
- **Remote Wake-up call set via dialling**
 A Hotel receptionist can set a timed reminder by using the Telephone push buttons. The guest will receive a reminder at the programmed time, on their rooms extension.
- **Voice Mail Delete on Check-out**
 Guests extension messages are automatically deleted when a guest has checked-out.

- **Telephone charge printout on Check-out**
 The SMDR (Station Message Detail Recording) prints the following information:

 - Room Check-in/Check-out
 - Timed Reminder Start/Answer/No Answer
 - Incoming/Outgoing Trunk
 - Dialed number
 - Call Duration
 - Account code entry

Another SMDR feature is programmable Message Print-out. This feature allows messages to be stored in a printing message area and accessed via the operator extension. The selected message will be printed on the SMDR.

Separately from standard SMDR, a record of all calls made from a guest room can be printed out. Charge items, including room mini bar, a preset profit margin, and tax can be added to the bill.

For all Hospitality features, TDA30 requires Memory Expansion Card
 *Not available for TDA15

Built-in Voice Message Card

Installing an optional Simplified Voice Message (SVM) card in the PBX allows the PBX to provide extensions with answering machine features. An extension user can record a personal greeting message to greet an incoming call and ask the caller to leave a voice message. The user can also play back and clear greeting messages and the voice messages left by callers.

Up to two SVM cards can be installed in both the TDA15 and TDA30 PBX. The SVM card has two channels, allowing two users to access a single card at the same time.

When an extension is assigned to an SVM card through system programming, a message box is created for that extension. This message box is used to store greeting messages and voice messages for that extension. Each Proprietary Telephone (PT), Single Line Telephone (SLT), and Portable Station (PS) can be assigned its own message box.

- The SVM card has the following available features:
- SVM Extension number can be set as Call Forward and Intercept Routing Destination
 - Greeting Messages can be recorded for each Time Mode (Day/Night/Lunch/Break)
 - Message Notification via message waiting lamp on Proprietary Telephone or change in Dial Tone on Single Line Telephones.
 - Callers details are recorded and displayed on Proprietary Telephone Display
 - Messages are replayed in order of oldest message first
 - Remote mailbox access from outside line
 - Remote mailbox access from different extension

Up to 125 messages with a maximum total recording time of 60 minutes can be recorded per card. This space is shared between the message boxes of all extensions assigned to that card. The recording quality and the recording time can be selected through system programming:

Recording Quality	Recording Time
High	Approx: 40 Minutes
Middle (default)	Approx: 60 Minutes
Low	Approx: 120 Minutes
